

Project Executable Files

Date	01 July 2026
Team ID	xxx xxx
Project Name	Smart Lender
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

Smart-Lender/
├── app.py                # Flask backend application
├── main.ipynb            # Model training and preprocessing notebook
├── requirements.txt      # Python dependencies
├── runtime.txt           # Python runtime version (for deployment)
├── Procfile              # Gunicorn start command (for deployment)
├── rdf.pkl               # Trained Random Forest model
├── scale1.pkl            # Saved StandardScaler
├── loan_prediction.csv   # Dataset used for training
├── README.md             # Project documentation
├── templates/
│   ├── home.html        # Home page
│   ├── predict.html     # Loan prediction form
│   └── submit.html      # Prediction result page
├── static/
│   ├── css/
│   │   └── style.css    # Stylesheet
│   ├── js/
│   │   └── script.js    # JavaScript file (if used)
│   └── images/
│       ├── logo.png     # Project logo
│       └── banner.jpg    # Background/banner images
└── screenshots/
    ├── home.png         # Home page screenshot
    ├── predict.png      # Prediction page screenshot
    └── result.png        # Result page screenshot
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://smart-lender-crsz.onrender.com/
Login Credentials (Demo)	NA
Platform / Hosting Provider	Render
Repository Link	https://github.com/Likhith6234/Smart-Lender
Demo Video Link	https://drive.google.com/file/d/1pG4X3EnbLGHCGfTuvw1CpYu_kS9g3GzV/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Anaconda Navigator with Python 3.x; Processor: Intel i3 or above; RAM: Minimum 4 GB;

Required libraries: NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Flask, Joblib/Pickle, XGBoost

Step 1: Clone or download the project repository

Step 2: Install dependencies: `pip install -r requirements.txt`

Step 3: Ensure the trained model file (floods.save) is present in the project directory

Step 4: Start the Flask application: `python app.py`

Step 5: Open a browser and go to: `http://127.0.0.1:5000`

Step 6: On the Prediction Input page, enter rainfall and weather values to view the flood risk result

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No known issues identified during testing	N/A
2		
3
