

Brainstorming & Idea Prioritization Template

Date	01/07/2026
Team ID	
Project Name	Smart Lender
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Neeharika Veluvolu	Retrain the Random Forest model with pinned library versions and cross-validation to fix the current version-mismatch warnings and improve reliability.	Model / ML	1
2	Neeli Likhith Madhav	Add input validation and proper error handling in the Flask backend so invalid or missing form data doesn't crash the app.	Backend / Code Quality	2
3	Sarani Phanisree Nowbottu	Improve the UI/UX with real-time form validation messages and a loading indicator while the prediction is processing.	Frontend / UI	3
4	Raunak Rai	Set up deployment configuration (Procfile, pinned requirements.txt) so the app is production-ready for hosting on platforms like Render.	Deployment	4
5	Kalluri Rishendra	Show a prediction confidence/probability score alongside the approval decision, instead of a plain Yes/No result.	Model / ML	1
6	Neeharika Veluvolu	Add basic logging and an analytics dashboard to track how many predictions are made and their approval/rejection trends.	Feature Enhancement	5

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Retrain the Random Forest model with pinned versions, cross-validation, and add a prediction	High	High	1	Yes

	confidence score.				
2	Add robust input validation and error handling in the Flask backend.	High	High	2	Yes
3	Set up deployment configuration and pin dependency versions for production readiness.	High	High	3	Yes
4	Enhance the UI/UX with real-time form validation and loading indicators.	Medium	Medium	4	Yes
5	Add logging and a basic analytics dashboard for prediction trends.	Medium	Low	5	No
