Empathy Map

Create an empathy map to understand your customer/user from four perspectives what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer centric solution.

SAYS "I just want to know quickly whether my loan will be approved or not." "Why do I have to enter numeric codes for things like Gender or Property Area instead of picking simple options?" "I hope the system looks at my credit history and not just my income."	THINKS "Will this prediction be as fair as a real bank loan officer's decision?" "What happens if I accidentally enter the wrong value in one of the fields?" "Maybe adding my co-applicant's income will improve my approval chances."
PERSONA NAME: Loan Applicant <i>(Role / User Type: End user of the Smart Lender loan-prediction platform)</i>	
DOES - Fills out the Smart Lender prediction form with personal, income, and property details. - Double-checks the Loan Amount and Credit History fields before clicking submit. - Reloads or retries the form if the result page seems slow or unclear.	FEELS - Anxious while waiting for the instant prediction result. - Relieved and confident when the result shows "Loan Will be Approved." - Frustrated if a form crashes or gives an unclear result because of a small input mistake.
