Project Name	Smart Lender
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A male applicant seeking a loan.	Secure a loan for the property.	Married with no co-applicant income.	Self-employed with a good credit history.	Optimistic about loan approval.
PS-2	A self-employed, graduate female applicant using the Smart Lender platform to check her eligibility.	Get an instant, unbiased loan-approval decision instead of waiting on manual bank review.	Her Credit_History field shows as "Bad" and she has no Co-applicant Income to enter.	She only recently became self-employed, so her Applicant Income is inconsistent month to month.	Anxious that the system's "Loan Will Not be Approved" result won't reflect her true repayment ability.
PS-3	An unmarried, salaried graduate applicant filling out the Smart Lender prediction form.	Secure loan approval for a property in an Urban area.	His individual Applicant Income alone is on the lower side of the typical approved range.	He can add a Co-applicant Income from a family member, which the model factors into the prediction.	Hopeful that the combined income entered will push the model's decision toward "Loan Will be Approved."
PS-4	A married applicant with multiple Dependents filling out the loan prediction form.	Get approval for a higher Loan Amount to buy a Semiurban property.	He has more Dependents and only a moderate combined income to enter into the form.	His Credit_History field is marked "Good", which the trained Random Forest model weighs heavily.	Confident that his strong credit history will offset the higher loan amount he's requesting.
PS-5	A rural applicant with limited digital literacy trying to use the Smart Lender web form.	Get a quick loan decision without needing to visit a physical bank branch.	He is unfamiliar with dropdown fields like Education, Self_Employed and Property_Area.	The current form gives no field-level guidance or validation messages to catch input mistakes.	Frustrated that a simple input mistake could lead to a wrong prediction or a failed submission.
